Time Series Database Interface: TSmisc Extensions

September 23, 2019

1 Introduction

The package *TSmisc* provides methods for generics in the package *TSdbi*. A complete vignette, illustrating the general functionality of all *TSdbi* extension packages is provided in the vignette with package *TSdata*. Installing that package requires that most of the *TS** packages are available, which will not be necessary for most users, so it may be easier to get the pdf version of the vignette from CRAN at `http://cran.r-project.org/web/packages/TSdata/index.html`.
